

# BHASKAR VISWANADH DEVISETTI

☎ +91-7993041307 ✉ viswanathdevisetti789@gmail.com 🔗 LinkedIn 🐙 GitHub

## Technical Skills

---

**Cloud & DevOps:** AWS EC2, S3, IAM, Docker, Docker Compose, Kubernetes, GitHub Actions, CI/CD

**Linux & Scripting:** Linux Administration, Bash, Python, User & Group Management, Process Management

**Containers & Orchestration:** Docker, Kubernetes, Minikube, Containerization

**Networking:** TCP/IP, DNS, DHCP, HTTP/HTTPS, VLANs, Subnetting, Routing, Network Troubleshooting

**Tools:** Git, GitHub, Wireshark, Nmap, Cisco Packet Tracer

## Experience

---

**Network Operations Intern**, Centurion University of Technology and Management Feb 2025 – Feb 2026

- Maintained campus network infrastructure including switches, routers, and access points supporting daily operations.
- Monitored network performance and troubleshoot LAN/WAN connectivity issues across multiple departments.
- Configured VLANs, subnetting, routing, and firewall access policies following security best practices.
- Assisted in server monitoring, backup operations, and infrastructure documentation within data center environments.
- Performed Linux administration tasks and resolved networking and system-related issues for end users.

## Projects

---

**Internal Developer Platform (IDP) CLI for Automated Application Deployment** GitHub Repo

- Developed a CLI-based Internal Developer Platform (IDP) using Go to automate end-to-end application deployment workflows.
- Implemented Docker-based containerization with automated image build and packaging.
- Designed a configuration-driven system using YAML to dynamically generate Kubernetes manifests, eliminating static deployment files.
- Integrated Kubernetes (Minikube) for orchestration, enabling scalable application deployment with configurable replicas.
- Automated service exposure and runtime URL resolution, allowing direct browser access after deployment.
- Reduced multi-step deployment processes into a single command (`idp deploy`), improving developer productivity and experience.

**Containerized Network Monitoring Platform with CI/CD** GitHub Repo

- Developed a Flask-based monitoring platform to collect CPU, memory, uptime, and interface metrics from network devices.
- Automated polling of 18+ switches using Paramiko and APScheduler for continuous infrastructure monitoring.
- Containerized the application using Docker and Docker Compose for consistent deployments.
- Implemented CI/CD pipelines using GitHub Actions to automatically build and validate Docker images.
- Deployed the platform on AWS EC2 and exposed monitoring dashboards for operational visibility and troubleshooting.

## Education

---

**Centurion University of Technology and Management**, Vizianagaram

Bachelor of Technology in Computer Science and Engineering (Computer Networks)

**CGPA: 9.3**
